Table 133. There is at least one place where the person feels afraid or scared (in home, day program, work, walking in the community, in transport, or other place) °	259
Table 134. Have someone to go to for help if they ever feel scared (‘yes’ responses only)	261

Executive Summary

The National Core Indicators (NCI) are standard measures used across states to assess the outcomes of services provided to individuals with intellectual/developmental disabilities and their families. Indicators address key areas of concern such as employment, respect/rights, service planning, community inclusion, choice, and health and safety. The data that result from NCI surveys are often used to inform strategic planning, produce legislative reports, and prioritize quality improvement initiatives. Many states also share the data with stakeholder groups such as Quality Councils and use the stakeholder feedback to help set priorities and establish policy direction.

The NCI In-Person Survey¹ is administered to individuals with a developmental disability who receive at least one service other than case management. Not all states that participate in NCI administer the In-Person Survey on an annual basis. Of the 46 states, District of Columbia and 22 sub-state entities who participated in NCI during the 2017-18 data collection cycle, 35 states and the District of Columbia submitted a valid sample of In-Person Survey data: Alabama (AL), Arizona (AZ), Arkansas (AR), California (CA), Colorado (CO), Connecticut (CT), Delaware (DE), District of Columbia (DC), Florida (FL), Georgia (GA), Illinois (IL), Indiana (IN), Kansas (KS), Kentucky (KY), Louisiana (LA), Maine (ME), Massachusetts (MA), Michigan (MI), Minnesota (MN), Missouri (MO), North Carolina (NC), Nebraska (NE), Nevada (NV), New York (NY), Ohio (OH), Oklahoma (OK), Oregon (OR), Pennsylvania (PA), Rhode Island (RI), South Carolina (SC), Tennessee (TN), Utah (UT), Vermont (VT), Virginia (VA), Wisconsin (WI), and Wyoming (WY). This Final Report provides a summary of results based on data submitted by June 30, 2018.

The following are weighted NCI national averages for a selection of survey items. Complete breakouts by state of items in the In-Person Survey can be found in the Results section of this report.

Note: *All qualified Californians with a developmental disability have both a civil right and an individual entitlement to receive services from the California Department of Developmental Services. California law mandates that the intake process begin within 15 days of an individual's or family's request for services and that the Department of Developmental Services begin providing services within 120 days after intake. These statutory requirements make California's service system unique and could impact comparisons between its survey results and the results of other states.*

¹ Formerly, the Adult Consumer Survey

2017-18 In-Person Survey

NCI
Average
Data
(Weighted)

25,671 adults with I/DD participated in the 2017-18 survey in 35 states* and the District of Columbia.

Respondents are adults with I/DD age 18 and older receiving at least one paid service (in addition to case management) from the state DD agency.

Residence

Parent or relative's home	39%
Group home	31%
Own home/apartment	18%
ICF/ID or other institutional setting	4%
Foster care or host home	5%
Other/don't know	2%

Level of Intellectual Disability

Mild ID	41%
Moderate ID	29%
Severe ID	13%
Profound ID	8%
Unspecified or unknown	8%

- 59% are male
- 90% have ID**
- 42 is the average age
- 18% have a paying job in the community
- 45% want a paying job in the community

Diagnoses **

Not mutually exclusive

Have a primary care doctor

Visited dentist in the past year

Reported to be under full guardianship**

*AL, AR, AZ, CA, CO, CT, DC, DE, FL, GA, IL, IN, KS, KY, LA, MA, ME, MI, MN, MO, NC, NE, NV, NY, OH, OK, OR, PA, RI, SC, TN, UT, VA, VT, WI, WY.

**Don't know responses included in denominator

2017-18 In-Person Survey

Respondents are adults with I/DD age 18 and older receiving at least one paid service (in addition to case management) from the state DD agency.

Like their home

Like their paid job in the community

Feel services are helping them live a good life

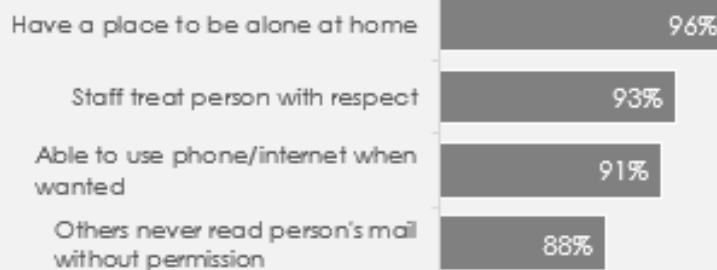

- 78% have friends who are not staff or family
- 80% can see friends when they want

- 42% want more help to make or keep in contact with friends
- 10% often feel lonely

Access and Inclusion

- 93% have the **transportation** they need to get where they need to go
- 84% have the **transportation** they need to get where they want to go
- 85% are able to go out and **do the things they like to do**
- 79% get to **do things they like to do as often as they want**
- 85% have **enough** things they enjoy doing when at home

Privacy and Respect

Would like paid job in the community

Take classes/trainings to get job/better job

Have paid community employment as goal in service plan

I. Results

This section briefly describes the structure of the survey instrument and presents the results of the most recent data collection cycle.

Survey Administration

Thirty-five (35) states and the District of Columbia administered the In-Person Survey in 2017-18 and submitted valid samples for analysis: Alabama (AL), Arizona (AZ), Arkansas (AR), California (CA), Colorado (CO), Connecticut (CT), Delaware (DE), District of Columbia (DC), Florida (FL), Georgia (GA), Illinois (IL), Indiana (IN), Kansas (KS), Kentucky (KY), Louisiana (LA), Maine (ME), Massachusetts (MA), Michigan (MI), Minnesota (MN), Missouri (MO), North Carolina (NC), Nebraska (NE), Nevada (NV), New York (NY), Ohio (OH), Oklahoma (OK), Oregon (OR), Pennsylvania (PA), Rhode Island (RI), South Carolina (SC), Tennessee (TN), Utah (UT), Vermont (VT), Virginia (VA), Wisconsin (WI), and Wyoming (WY).

Together, they collected survey responses and information from a total of 25,671 individuals.

Survey Development

The In-Person Survey was initially developed by a technical advisory subcommittee for the purpose of collecting information directly from individuals with intellectual/developmental disabilities and their families or advocates. Many questions were drawn from survey instruments in use in the field; others were developed specifically for NCI. NCI staff routinely test and refine the instrument based on feedback from surveyors.

Most participating states use the basic survey tool developed by the project. However, some states opt to incorporate additional survey questions to look more deeply at specific issues. The addition of supplementary questions is typically done after a state participates in NCI for at least a year and establishes baseline results. The results from those supplementary questions are not included in this report.

Organization of the Survey

The In-Person Survey consists of a pre-survey form, three distinct survey sections, and a surveyor feedback form. Each is described below.

Pre-Survey Information

This form has questions that help the surveyor prepare for the meeting as well as assist the surveyor in administering the survey questions. Pre-Survey information is not included in the analysis by HSRI and thus not included in this report; it is for surveyor use only.

Background Information

This section consists of questions about demographics, residence, health, employment status, and services and supports. Data is generally collected from state records, case managers, or a combination of both.

Section I

This section attempts to determine individuals' level of satisfaction and opinions. It may *only* be completed through a direct meeting with the individual.

Section II

This section contains questions that are answered by a direct meeting with the individual when possible. If the person is unable to respond, a proxy who knows the person well may be used. Case managers or service coordinators are not allowed to respond to these questions on the individual's behalf.

Surveyor Feedback Sheet

This form is used to record information such as the length of the NCI meeting with the individual and any problematic questions encountered.

Presentation of Demographics

The following section details the demographic profile of individuals included in the 2017-18 In-Person Survey. Tables display demographic results listed alphabetically by state.

States receive an 'n/a' designation within the table if fewer than 20 people responded to the survey item; however, their data are included in the NCI Average.

Note on Significance: Statistical significance depends on both the amount by which a state differs from the average for a given item and the state's sample size for that item. So there may be instances where State A's difference from the average is larger than State B's, but State B is shown as significantly different from the average whereas State A is not. The larger the sample size of a state, the smaller the difference needs to be for it to be statistically significant.

Note on NCI Averages: The NCI averages contained in this report are "weighted" means; their calculations reflect the relative population sizes of participating states as well as the states' sample sizes. Prior to 2016-17, NCI averages were calculated as the simple arithmetic mean of all state means (an approach known as "average of averages"), so comparisons to past reports should be made with caution. In addition, the state data from WI and CA were similarly internally weighted because their state samples included oversamples of certain populations. WI oversampled by program and CA oversampled by regional center. See more about weighting in the Methodology section.

Demographic Characteristics of Respondents

This section presents descriptive information on the respondents surveyed.

For several states, survey items in the Background Information section (including certain items related to Demographics, Health, Medication, and Wellness) had a large amount of missing data or data recorded as “don’t know.” Where 25% or more of a state’s sample had “don’t know” or missing responses, we used an asterisk (*) to indicate that state’s data should be interpreted with caution.

The quantity of missing data can be a result of several factors. We do not know whether the data are missing systematically or randomly; for example, are data missing across the board for those in a specific waiver population in a given state? If so, the resulting data are not representative of the entire sample or population. We advise caution when examining data that are indicated as having high rates of “missing” or “don’t know” responses. Please note that the NCI average reflects the average of data that were reported to NCI and may not be reflective of the service population across the country.

Table 1. Age †

State	Mean	Min	Max	Standard Deviation	Median	N
AL	46	18	91	14	45	381

Core Indicator Outcomes and Comparisons Across States

The following section provides outcome data for the In-Person Survey. Outcome results are presented in subsections that correspond with each of the In-Person Survey domains. For un-adjusted items in this report, outcome results are first shown in a graph with the NCI Average and then in a table that shows a breakout of each state's percentage.

For all un-adjusted outcome data, three tables are formatted so that all states are listed in descending order of percentage and are categorized as statistically significantly above the NCI Average, within the range of the NCI Average, or significantly below the NCI Average. Statistical significance is taken to be at or below the .01 level. For those states that fall within the NCI Average range, their 'always' or 'yes' response was not statistically different from the NCI Average.

States with fewer than 20 respondents to a question **are not** included in tables; however, their data **are** included in the NCI Average.

The tables also break out average results for each state by the type of residence: ICF/IID or other institutional settings, group residence, own home, parent/relative's home, foster or host home. Significance testing was not performed on the breakouts by residence, and the number of people in each residential setting is often too small to allow for valid state-to-state comparisons. For the same reason, in many cases statistically valid conclusions cannot be drawn about differences between residence types. This information is provided for states' internal purposes and should not be used to compare one state with another. If a state had fewer than 20 people in a residence type with valid responses to a given indicator, the outcome breakout by that residence type for that particular indicator is not reported. Figure A on the following page presents, by state, the number of people surveyed in each residence type.

Figure A. Number of people in each type of residence [^]

State	ICF/IID and Other Institutional Settings	Community-based Group Residential Settings	Own Home or Apartment	Parent's or Relative's Home	Foster Care or Host Home

How to Read the Tables in This Report

The "Overall in State" column represents the results for all cases in each state. This includes all cases that responded to this question. In the "Choice and Decision Making" domain, the percentages in this column are risk adjusted.

Table 71. Has enough things to do when at home ('yes' responses only)

Significantly Above NCI Average

State	Overall in State	N	ICF/IID and Other Instit. Settings	Group Residence
KY	95%	30	n/a	90%
IN	92%	584	n/a	n/a
VA	91%	459	74%	90%
WI	89%	354	n/a	85%
PA		59	80%	88%

('yes responses only') indicates the response that the percentages reflect. For example, 95% of people who answered this question from KY said "yes"

Within Average Range

State	Overall in State	N	ICF/IID and Other Instit. Settings	Group Residence	Own Home	Parent/ Foster or
MT	85%	261				
ND	84%	1,388				
WY	84%	350				
GA	84%	273	n/a	85%		
NCI Average	84%	14,267	75%	81%		
NC	83%	368	80%	81%		
LA	83%	289	86%	n/a		
OH	83%	492	68%	82%		
SD	83%	259	n/a	81%		
RI	83%	249	n/a	84%		
ID	82%	322	n/a	n/a		
AR	82%	296	n/a	76%		
MI	82%	319	n/a	79%		
HI	81%	194	n/a	75%		
MN	81%	242	n/a	72%		
NH	77%	210	n/a	75%		

These are the "residence type breakouts." The numbers in each column represent the percentage of people (who responded to this question) in the indicated residence type, who (using this example) reported having enough things to do while at home.

For example, looking at KY in this example, of the respondents who answered this question and live in a group residence, 90% reported having enough things to do at home.

For more information on what type of residence is included in each breakout group, see the section of this report called "Core Indicator Outcomes and Comparisons Across States"

Significantly Below NCI Average

State	Overall in State	N	ICF/IID and Other Instit. Settings	Group Residence	Relative	Host
OR	76%	290	n/a	69%	76%	73%
NV	73%	315	n/a	68%	71%	n/a
CO	73%	292	n/a	47%	74%	86%
UT		331	n/a	71%	85%	87%
AK		346			73%	n/a
VT		316			78%	85%
ME		261			65%	71%
VT		230			n/a	67%

This is the NCI Average. It represents the weighted average across all participating states. For more information on weighting, please see the section of this report called "Core Indicator Outcomes and Comparisons Across States"

For states in this section, statistical testing has indicated that their averages are statistically significantly below the NCI average

Choice and Decision-Making

People make choices about their lives and are actively engaged in planning their services and supports.

The In-Person Survey includes nine choice items that correspond to the Choice indicator; all but one item, “Chose Case Manager” (Table 39), were risk-adjusted. Outcome adjustment or “risk adjustment” is a statistical process used to control for differences in the individual characteristics of people who completed the NCI Survey across states. For a more robust description of risk adjustment see the Data Analysis section of Part II of the 2017-18 In-Person Survey National Report.

Two Choice composite scale scores were produced by adding and averaging Choice items. The Life Decisions scale (Table 37) refers to choice of: residence, work, day activity, staff, and roommates. The Everyday Choices scale (Table 38) refers to choice of: daily schedule, how to spend money, and free time activities. Both scales were risk-adjusted.

All NCI Averages are weighted. For more information on weighting see the Methodology section of Part II of the 2017-18 In-Person Survey National Report. For unadjusted, un-collapsed and unweighted data see Appendix D of Part II of the 2017-18 In-Person Survey National Report.

Table 29. Chose or had some input in choosing where they live *if not living in the family home* ('person made the choice' and 'person had some input' responses; adjusted variable, proxy respondents were allowed for this question)

± Question changed in 2017-18 survey tool to only include individuals who attended a day program or sheltered workshop

^g Analysis of this question changed from previous years; now based on those determined in the Background Information to attend an unpaid community activity, unpaid paid facility activity, or paid facility activity

[^]Results for WI are not shown as data to conduct risk adjustment were not available in state records

Table 33. Chose staff or were aware they could request to change staff (adjusted variable; 'chose staff' and 'staff were assigned but can be changed if requested by person' responses; proxy respondents were allowed for this question) ^

*According to LA state policy, people living in ICFs/ID are not assigned case managers.

Work

People have support to find and maintain community integrated employment.

NCI reports on four types of community jobs:

1. Individual job without publicly funded supports—an individual job in which the person does not receive state or other funded supports;
2. Individual job with publicly funded supports—an individual job in which the person receives state or other funded supports;
3. Group-supported—a job that takes part in an integrated setting but is done with a group of individuals with disabilities (e.g., work crew). Group-supported jobs may or may not receive publicly funded supports; and
4. **New in 2017-18: Community job in a business that primarily hires people with disabilities**—a job where the employees with disabilities interact with the non-disabled population; this job is ***not*** in a traditional sheltered workshop and is NOT an enclave

Note on OR and WI data: OR and WI data on type of community employment captured “no” and “don’t know” responses together (NCI states typically collect this information separately); therefore, their data ***are not*** comparable to other states and are not included in the employment tables that look at paid community job participation. Available data are reported in Appendix D.

For several states, survey items pertaining to paid community employment had a large amount of missing data or data recorded as “don’t know.” Items that include states’ results for which 25% or more of their sample were missing data (or reported as “don’t know”) are indicated with an asterisk (*).

The quantity of missing data can be a result of several factors. We do not know whether the data are missing systematically or randomly; for example, are the data missing across the board for those in a specific waiver population in a given state? If so, the resulting data are not representative of the entire sample or population. We advise caution when examining data that are indicated as having high rates of “missing” or “don’t know” responses. Please note that the NCI average reflects the average of data that were reported to HSRI and may not be reflective of the service population across the country.

All NCI Averages are weighted. For more information on weighting see the Methodology section of Part II of the 2017-18 In-Person Survey National Report. For un-collapsed and unweighted data see Appendix D of Part II of the 2017-18 In-Person Survey National Report.

Table 40. Has a paid job in the community; individual, group and/or in a business that primarily hires people with disabilities ('yes' responses only'; information may have been obtained through state records) ⁹**Significantly Above NCI Average**

Self-Determination

People have authority and are supported to direct and manage their own services.

For several states, survey items pertaining to self-determination had a large amount of missing data or data recorded as “don’t know.” State review of the data in this section note that the data missing may not be missing randomly, and results ***should be viewed with caution***.

Due to low response rates to questions in this section within states, and because data may not be missing randomly, ***no significance testing was conducted on self-determination items***. Items in this section are shown in table form only, with states listed in alphabetical order.

Note on change to survey: This section attempts to assess the self-direction experience, about which a proxy may be able to provide personal insight. Therefore, questions in this section may have been asked of the individual and/or proxy.

Note on WI data: For 20 participants in WI’s IRIS, WI collected items in the Self Direction module over the phone. Results should be viewed with caution as this is not standard NCI protocol.

All NCI Averages are weighted. For more information on weighting see the Methodology section of Part II of the 2017-18 In-Person Survey National Report. For un-collapsed and unweighted data see Appendix D of Part II of the 2017-18 In-Person Survey National Report.

Community Inclusion, Participation and Leisure

People have support to participate in everyday community activities.

One measure, the Community Inclusion Scale score, was produced by adding four of the items: whether the person did the following activities at least once: shopping, errands, for entertainment, and out to eat. For more information on development of scales, see the beginning of this section or the Data Analysis section of Part II of the 2017-18 In-Person Survey National Report.

All NCI Averages are weighted. For more information on weighting see the Methodology section of Part II of the 2017-18 In-Person Survey National Report. For un-collapsed and unweighted data see Appendix D of Part II of the 2017-18 In-Person Survey National Report.

Relationships

People have friends and relationships.

All NCI Averages are weighted. For more information on weighting see the Methodology section of Part II of the 2017-18 In-Person Survey National Report. For un-collapsed and unweighted data see Appendix D of Part II of the 2017-18 In-Person Survey National Report.

Satisfaction

People are satisfied with the services and supports they receive.

All NCI Averages are weighted. For more information on weighting see the Methodology section of Part II of the 2017-18 In-Person Survey National Report. For un-collapsed and unweighted data see Appendix D of Part II of the 2017-18 In-Person Survey National Report.

Service Coordination

Service coordinators are accessible, responsive, and support the person's participation in service planning.

Note on terminology: Please note, this report uses the term “case managers”, state specific terminology may refer to “service coordinator”, “care coordinator” or other terms. Similarly, NCI uses the term “service plan”, state specific terminology may refer to terms including “individual service plan” (ISP) or “individual program plan” (IPP). Surveyors are instructed to use the appropriate state terminology during surveys.

All NCI Averages are weighted. For more information on weighting see the Methodology section of Part II of the 2017-18 In-Person Survey National Report. For un-collapsed and unweighted data see Appendix D of Part II of the 2017-18 In-Person Survey National Report.

Access

Publicly funded services are readily available to individuals who need and qualify for them.

∞ Categories are not mutually exclusive

Health

People secure needed health services.

For several states, survey items in the Background Information section (including certain items related to Health) had a large amount of missing data or data recorded as “don’t know.” State review of the data in this section note that the data missing may not be missing randomly, and results **should be viewed with caution**. Items that include states’ results for which 25% or more of their sample were missing data (or reported as “don’t know”) are indicated with an asterisk (*).

The quantity of missing data can be a result of several factors. We do not know whether the data are missing systematically or randomly; for example, are the data missing across the board for those in a specific waiver population in a given state? If so, the resulting data are not representative of the entire sample or population. We advise caution when examining data that are indicated as having high rates of “missing” or “don’t know” responses.

Note on change to reporting: Due to the high rate of missing data and “don’t know” responses, tables in this section are shown twice. The first table illustrates data as typically reported (by significance tier and averages in descending order, excluding missing data and “don’t know” responses). The second table shows data in alphabetical order and includes the percentage of missing and “don’t know” responses. Data in both sets of tables are weighted.

All NCI Averages are weighted. For more information on weighting see the Methodology section of Part II of the 2017-18 In-Person Survey National Report. For un-collapsed and unweighted data see Appendix D of Part II of the 2017-18 In-Person Survey National Report.

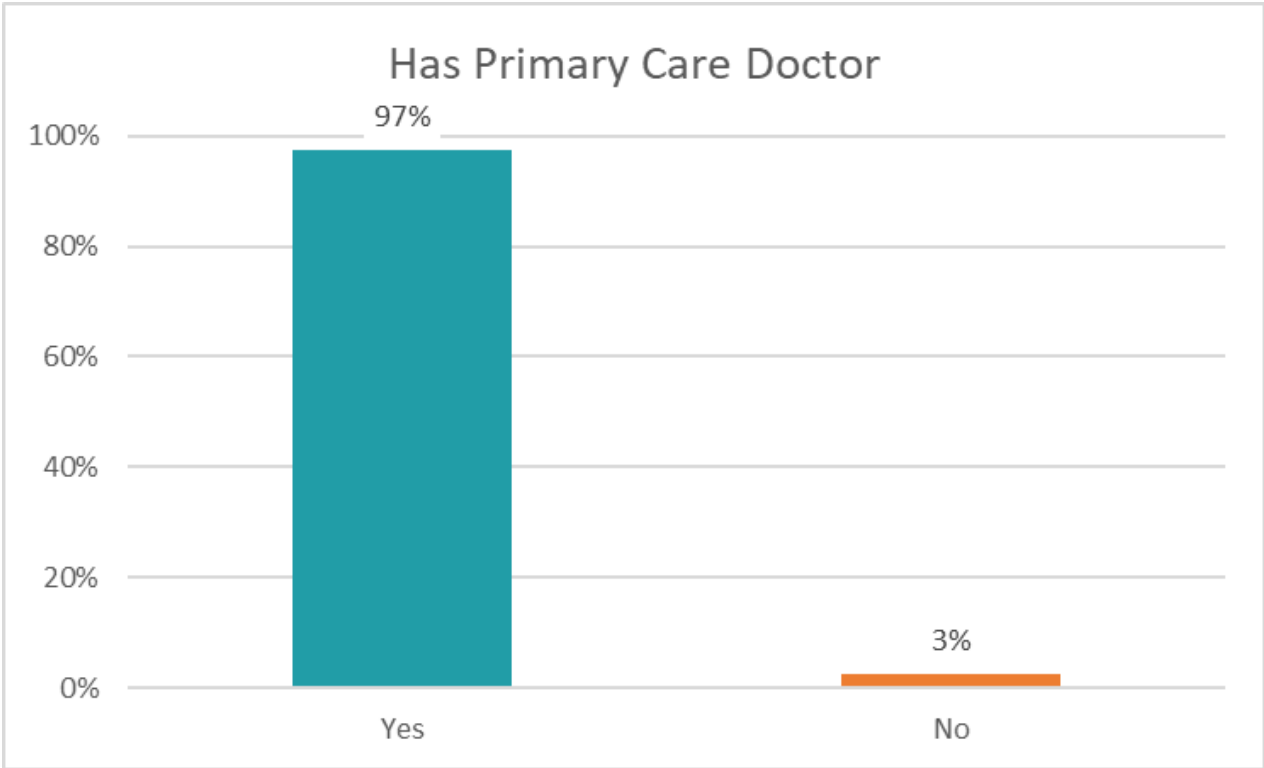

Table 100. Has a primary care doctor or practitioner ('yes' responses only; information may have been obtained through state records)

Medications

Medications are managed effectively and appropriately.

For several states, survey items in the Background Information section (including certain items related to Medications) had a large amount of missing data or data recorded as “don’t know.” State review of the data in this section note that the data missing may not be missing randomly, and **results should be viewed with caution**. Items that include states’ results for which 25% or more of their sample were missing data (or reported as “don’t know”) are indicated with an asterisk (*).

The quantity of missing data can be a result of several factors. We do not know whether the data are missing systematically or randomly; for example, are the data missing across the board for those in a specific waiver population in a given state? If so, the resulting data are not representative of the entire sample or population. We advise caution when examining data that are indicated as having high rates of “missing” or “don’t know” responses.

Note on change to reporting: Due to the high rate of missing data and “don’t know” responses, tables in this section are shown twice. The first table illustrates data as typically reported (by significance tier and averages in descending order, excluding missing data and “don’t know” responses). The second table shows data in alphabetical order and includes the percentage of missing and “don’t know” responses. Data in both sets of tables are weighted.

All NCI Averages are weighted. For more information on weighting see the Methodology section of Part II of the 2017-18 In-Person Survey National Report. For un-collapsed and unweighted data see Appendix D of Part II of the 2017-18 In-Person Survey National Report.

Wellness

People are supported to maintain healthy habits.

For several states, survey items in the Background Information section (including certain items related to Wellness) had a large amount of missing data or data recorded as “don’t know.” State review of the data in this section note that the data missing may not be missing randomly, and **results should be viewed with caution**. Items that include states’ results for which 25% or more of their sample were missing data (or reported as “don’t know”) are indicated with an asterisk (*).

The quantity of missing data can be a result of several factors. We do not know whether the data are missing systematically or randomly; for example, are the data missing across the board for those in a specific waiver population in a given state? If so, the resulting data are not representative of the entire sample or population. We advise caution when examining data that are indicated as having high rates of “missing” or “don’t know” responses.

Note on change to reporting: Due to the high rate of missing data and “don’t know” responses, tables in this section are shown twice. The first table illustrates data as typically reported (by significance tier and averages in descending order, excluding missing data and “don’t know” responses). The second table shows data in alphabetical order and includes the percentage of missing and “don’t know” responses. Data in both sets of tables are weighted.

All NCI Averages are weighted. For more information on weighting see the Methodology section of Part II of the 2017-18 In-Person Survey National Report. For un-collapsed and unweighted data see Appendix D of Part II of the 2017-18 In-Person Survey National Report.

Table 117. Exercises or does physical activity at least once per week for 10 minutes or more at a time ('1 or 2 times', '3 or 4 times' and '5 or more times' responses; proxy respondents were allowed for this question) ⁹

Respect and Rights

People receive the same respect and protections as others in the community.

All NCI Averages are weighted. For more information on weighting see the Methodology section of Part II of the 2017-18 In-Person Survey National Report. For un-collapsed and unweighted data see Appendix D of Part II of the 2017-18 In-Person Survey National Report.

Safety

People are safe from abuse, neglect, and injury.

All NCI Averages are weighted. For more information on weighting see the Methodology section of Part II of the 2017-18 In-Person Survey National Report. For un-collapsed and unweighted data see Appendix D of Part II of the 2017-18 In-Person Survey National Report.
