## **What is NCI?**

The National Core Indicators (NCI) program is a voluntary effort by state developmental disability agencies to gauge and track their own performance using a common and nationally validated set of performance measures. The effort is coordinated by the National Association of State Directors of Developmental Disabilities Services (NASDDDS) in collaboration with the Human Services Research Institute (HSRI). NCI has developed a set of more than 100 standard performance measures (or “indicators”) that states use to assess the outcomes of services provided to individuals and their families. These indicators focus on areas such as: employment, rights, service planning, community inclusion, choice, health, and safety. During the 2012-13 data collection cycle, 33 states and 22 sub-state entities participated in NCI.

## **What is the NCI Child Family Survey?**

The NCI Child Family Survey is a mail-in survey sent to families with children who live in the family home and receive services from the State DD Agency. The NCI Child Family Survey is used to gather data on family outcomes and it is refined and tested to ensure that it is valid and reliable. The survey collects information on the child and respondent’s demographics, services and supports received, and contains six groupings of questions that probe specific areas of quality service provision: information and planning, access and delivery of services, choice and control, community connections, satisfaction, and outcomes. Respondents also have the option of writing open-ended comments concerning their family’s participation in the service system.

## **What topics are covered by the survey?**

The National Core Indicators are organized by topic or “domain.” Each domain consists of sub-domains, and each sub-domain is associated with a particular area of concern. The NCI Child Family Survey includes items to measure the “Family Outcomes” domain. The table on the following page lists the NCI Family Surveys sub-domains and concerns.

**TABLE 1. NCI FAMILY SURVEY INDICATORS – SUB-DOMAINS AND CONCERN STATEMENTS**

Sub-Domain	Concern
<b>Information and Planning</b>	Families/family members with disabilities have the information and support necessary to plan for their services and supports.
<b>Access &amp; Support Delivery</b>	Families/family members with disabilities get the services and supports they need.
<b>Choice &amp; Control</b>	Families/family members with disabilities determine the services and supports they receive and the individuals or agencies who provide them.
<b>Community Connections</b>	Family members with disabilities use integrated community services and participate in everyday community activities.
<b>Satisfaction</b>	Families/family members with disabilities receive adequate and satisfactory supports.
<b>Family Outcomes</b>	Individual and family supports make a positive difference in the lives of families.

## How were people selected to participate?

States were asked to administer the Child Family Survey by selecting a random sample of at least 1,000 families who had a child<sup>1</sup> with a developmental disability living at home and received at least one direct service or support other than service coordination.

All states mailed out a paper survey to families selected in their sample. A sample size of 1,000 was recommended with the expectation of a 40% return rate or greater (yielding 400 or more usable responses per state). However, most states decided to sample more than 1,000

---

<sup>1</sup> Some states include child up to age 22 who are receiving services as a child.

families, expecting a lower response rate than 40%. A final sample size of 400 would guarantee a  $\pm 5\%$  margin of error and a 95% confidence level when interpreting the results. Both the confidence interval and margin of error used are widely acceptable for reviewing results, regardless of population size. States with fewer than 1,000 potential respondent families were instructed to send surveys to all eligible families. With response rates lower than expected, we included in our national reports those states that submitted fewer than 400 surveys up to a margin of error of no greater than  $\pm 7\%$ .

## **Limitations of Data**

The NCI Child Family Survey tool is not intended to be used for monitoring individuals or providers, but rather for assessing system-wide performance. The NCI Statewide Average should not be interpreted as necessarily defining “acceptable” levels of performance or satisfaction, nor does it provide benchmarks for acceptable or unacceptable levels of performance for each indicator. Instead, it describes average levels of performance or satisfaction across the State. It is up to public managers, policy-makers, and other stakeholders to decide what is an acceptable or unacceptable result (i.e., percentage of individuals achieving the indicated outcome).

## **What is contained in this report?**

This report illustrates 2012-2013 NCI Child Family Survey demographic and outcome results from Connecticut compared to the NCI Average (the average of all state averages). In 2012-13, seven states conducted to the Child Family Survey. All results are shown in chart form along with descriptive text to the right of each outcome chart. Charts do not display the number of respondents to each question. Some questions may have a low response rate, particularly questions about knowledge and use of ID/DD money, reporting grievances, and abuse or neglect. States with less than 20 responses to a particular question were excluded from analysis for that question. The number of responses per each question are included in the national reports. All state and national data results for this survey can be found online at <http://www.nationalcoreindicators.org/resources/reports/>.
