

National Core Indicators® 2018-19 In-Person Survey (IPS)

Work

People have paid jobs in community-based settings or have otherwise meaningful day activities.

What to know about the presentation of Work data:

Charts with un-collapsed weighted NCI average

Here's what [collapsed](#) data are

State and weighted NCI averages

The number of respondents (N) is not weighted

Here's what [weighting](#) data means for comparisons

NCI employment categories

Review the [four categories of employment](#) NCI reports on

DATA CAUTION!

Many states' data have a large amount of missing data or data recorded as “don't know”

Read about what this means [here](#)

Work

Table 1. Has a paid community job; individual, group and/or in a business that primarily hires people with disabilities ('yes' responses only'; information may have been obtained through state records)	7
Table 2. Type of paid community job (of those with paid community job)(information may have been obtained through state records)	9
Table 3. Average biweekly hours by type of paid community job (information may have been obtained through state records)	11
Table 4. Average hourly wage at paid community job by type of community employment (information may have been obtained through state records)	13
Table 5. Average length of employment in current paid community job (shown in months; information may have been obtained through state records)	15
Table 6. Receives paid time off (for example, paid vacation and/or sick time) at paid community job (information may have been obtained through state records)	17
Table 7. Four most common job industries (among those reported to have a job in the community; information may have been obtained through state records)	19
Table 8. Does not have paid community job and would like a job in the community ('yes' responses only).....	21
Table 9. Reasons does not want a paid community job (among those who do not currently have and do not want a paid community job).....	22
Table 10. Reasons does not want a paid community job (among those who do not currently have and do not want a paid community job, continued).....	23
Table 11. Has community employment as a goal in their service plan (information may have been obtained through state records)	25
Table 12. Takes classes, training or does something to get a job or do better at current job ('yes' responses only)	27
Table 13. Attends day program or sheltered workshop (program or center where other people with disabilities spend their day) ('yes' responses only)	29
Table 14. Volunteers ('yes' responses only)	31

Where do these data come from?

Some of the items are from the face-to-face survey. Others are drawn from administrative sources; these instances are noted in the table titles.

Items in this chapter are a part of the NCI Individual Outcomes domain (or topic area) and comprise the “Work” sub-domain (a specific area of concern within the domain). The Work sub-domain includes items that help determine whether “people have support to find and maintain community integrated employment”. Read more about NCI domains and sub-domains in the Overview chapter of this report.

What are “collapsed” data?

Many questions in the IPS allow respondents to answer a question with “middle” response like “maybe”, “sometimes” or “in-between”. The tables in this section present collapsed data. That means that two or more response options are grouped together if they are considered to reflect a positive outcome. The table titles explain which options were grouped.

To see the breakout of responses for each option, please see Appendix C.

What is weighting and why do we do it?

The NCI averages are “weighted” to reflect the states’ relative population and sample sizes. We created the weights using the state’s number of valid surveys and its total survey-eligible population. This way, a state that provides services to a larger number of people but uses a sample similar in size to other states has a greater influence on the overall NCI average (that is, its contribution is *proportional to its service population*).

Some states—in this survey year, **IN, MN, TX and WI**—intentionally oversampled one or more subpopulations or geographical regions to get more focused insights, so their weights are calculated slightly differently (using the number of completed surveys and service population sizes in each subpopulation or region). You can read more about this in the Methodology section of the Overview chapter.

The number of respondents (N) for each question *is not* weighted.

NCI paid community job categories

NCI reports on four types of community jobs:

1. Individual job without publicly funded supports—an individual job in which the person does not receive state or other funded supports;
2. Individual job with publicly funded supports—an individual job in which the person receives state or other funded supports;
3. Group-supported—a job that takes part in a community setting but is done with a group of individuals with disabilities (e.g., work crew). Group-supported jobs may or may not receive publicly funded supports; and
4. Community job in a business that primarily hires people with disabilities—a job where the employees with disabilities interact with the non-disabled population; this job is not in a traditional sheltered workshop and is NOT an enclave. This type was added to our definition in 2017-18.

DATA CAUTION!

Several states had large amounts of missing data or data recorded as “don’t know.” Where 25% or more of a state’s sample had “don’t know” or missing responses, we used an asterisk (*) to indicate that state’s data should be interpreted with caution as it may not accurately represent the sample or service population.

Note. For those surveyed from RI’s SDS service delivery model, there are no administrative records available from which to pull much of the background information. Therefore, the RI data from the background information section may not be representative of this population.

Other important state notes

MN, OR and WI data on type of community employment captured “no” and “don’t know” responses together (NCI states typically collect this information separately); therefore, their data are not comparable to other states and are reported separately.

NY was not able to collect data on employment and is not included in this section.

OR only tracks employment data for those who receive employment support through ODDS funding. Those who receive employment support through Vocational

Rehabilitation or anyone working independently in the community will not be reflected in these data.

For those surveyed from RI's SDS service delivery model, there are no administrative records available from which to pull much of the background information. Therefore, the RI data from the background information section may not be representative of this population

Presentation of state and weighted NCI averages

Averages

For the most part, the state outcomes are shown in descending order of percentage and are categorized as statistically significantly above the NCI Average, within the range of the NCI Average, or significantly below the NCI Average. Statistical significance is taken to be at or below the .01 level. For those states that fall within the NCI Average range, their 'always' or 'yes' response was not statistically different from the NCI Average. Other tables show the states listed in alphabetical order and are not tested for significance.

Tables that show significance also break out average results for each state by the type of residence: ICF/IID or other institutional settings, group residence, own home, parent/relative's home, foster or host home. Figure A on the following page shows, by state, the percentage of people surveyed in each residence type. Please note though that:

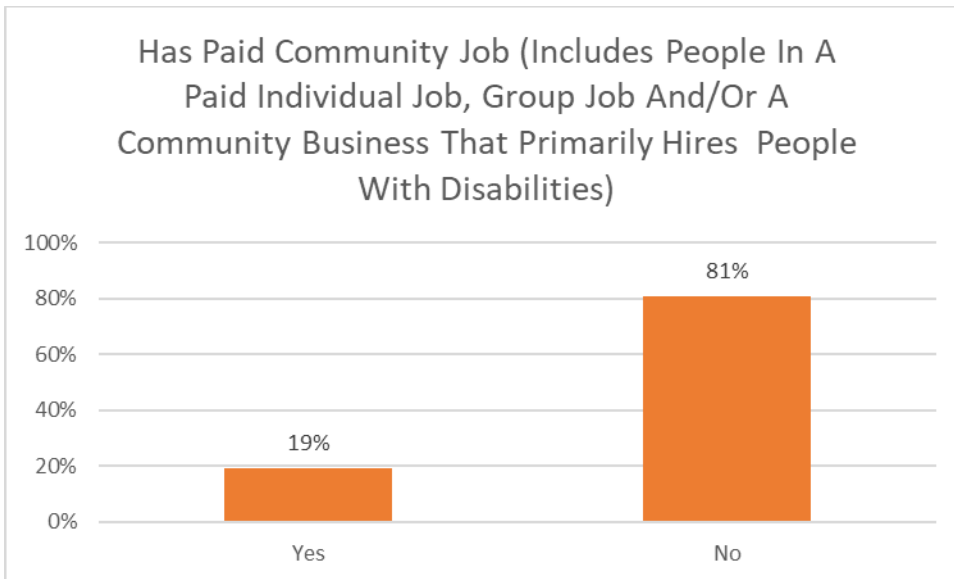

- Significance testing was not performed on the breakouts by residence
- The number of people in each residential setting is often too small to allow for valid state-to-state comparisons
- And in many cases, statistically valid conclusions cannot be drawn about differences in results between residence types

Still, we provide this information for states' internal purposes. It should not be used to compare one state with another.

To protect people's privacy, we do not show the data when fewer than 20 people from a state or residence type responded to a question (though their responses are included in the NCI average).

Figure A. Percentage of people surveyed in each residence type by state

⁷ Data for this item were not available in state records for MN, NY and WI.

State data with at least 25% "don't knows" and missing data are denoted with an asterisk (*)

MN, OR, and WI captured employment information differently from other states; their data are not comparable to other states and are therefore shown separately.

See all un-collapsed state data showing responses for all possible response options in Appendix C

State data with at least 25% “don’t knows” and missing data are denoted with an asterisk (*)

MN, OR, and WI captured employment information differently from other states; their data are not comparable to other states and are therefore shown separately.
