What is NCI?

The National Core Indicators (NCI) program is a voluntary effort by state developmental disability agencies to track their performance using a standardized set of consumer and family/guardian surveys with nationally validated measures. The effort is coordinated by the National Association of State Directors of Developmental Disabilities Services (NASDDDS) and the Human Services Research Institute (HSRI).

NCI has developed more than 100 standard performance measures (or 'indicators') that states use to assess the outcomes of services for individuals and families, including outcomes in the areas of employment, rights, service planning, community inclusion, choice, health, and safety. In 2015-16 a total of 45 states, the District of Columbia, and 22 sub-state entities were participating in NCI.

What is the NCI Adult Consumer Survey?

The NCI Adult Consumer Survey is a face-to-face meeting conducted with a person who is receiving services from the state; it is used to gather data on approximately 60 consumer outcomes, and it is regularly refined and tested to ensure that it is valid and reliable. Interviewers meet with individuals to ask questions about where they live and work, the kinds of choices they make, the activities they participate in within their communities, their relationships with friends and family, and their health and well-being.

What topics are covered by the survey?

The National Core Indicators are organized by "domains" or topics. These domains are further broken down into sub-domains, each of which has a statement that indicates the concerns being measured. Each sub-domain includes one or more "indicators" of how the state performs in this area. The table on the following page lists the domains, sub-domains, and concern statements addressed by the NCI Adult Consumer Survey indicators.

TABLE 1. NCI Adult Consumer Survey – Domains, Sub-Domains, Concern Statements

Domain	Sub-Domain	Concern Statement
	Work	People have support to find and maintain community integrated employment.
Individual Outcomes	Community Inclusion	People have support to participate in everyday community activities.
	Choice and Decision- Making	People make choices about their lives and are actively engaged in planning their services and supports.
Individual Outcomes	Self Determination	People have authority and are supported to direct and manage their own services.
	Relationships	People have friends and relationships.
	Satisfaction	People are satisfied with the services and supports they receive.
	Safety	People are safe from abuse, neglect, and injury.
	Health	People secure needed health services.
Health, Welfare, and Rights	Medications	Medications are managed effectively and appropriately.
	Wellness	People are supported to maintain healthy habits.
	Respect/Rights	People receive the same respect and protections as others in the community.
	Service Coordination	Service coordinators are accessible, responsive, and support the person's participation in service planning.
System Performance	Access	Publicly-funded services are readily available to individuals who need and qualify for them.

How were people selected to participate?

Each state is instructed to attempt to complete a minimum of 400 surveys with a random sample of individuals age 18 or older who are receiving at least one publicly funded service besides case management. A sample size of 400 allows valid comparisons to be made across states with a 95% confidence level and a +/- 5% margin of error. Both the confidence level and margin of error used are widely accepted for reviewing results, regardless of population size. Most states draw a sample greater than 400 to account for refusals and inaccurate contact information. For more information on sampling, please see Appendix C of the national report, accessible at http://www.nationalcoreindicators.org/resources/reports/

Proxy Respondents

Proxy responses are allowed only for Section II (Community Inclusion, Choices, Respect/Rights, and Access to Needed Services), which is based on objective measures. Proxy respondents are used only when the individual receiving services cannot complete the survey or chooses to have a proxy respondent. Only people who know the individual well – such as family, friends, or staff – are acceptable respondents. To avoid conflict of interest, service coordinators are not allowed to provide proxy responses for individuals on their caseloads.

Limitations of Data

The NCI Adult Consumer Survey tool is not intended to be used for monitoring individuals or providers; instead, it assesses system-wide performance. The NCI Average should not be interpreted as necessarily defining "acceptable" levels of performance or satisfaction. Instead, it describes average levels of performance or satisfaction across the states. It is up to public managers, policy-makers, and other stakeholders to decide what is an acceptable or unacceptable result (i.e., scale score or percentage of individuals achieving the indicated outcome).

IMPORTANT NOTE ON ANALYSIS. In examining the results included in this report, we found questions for which 25% or more of an individual state's sample were marked "don't know" or were missing data. Results denoted with two asterisks (**) indicate that there were states in which this occurred. To see individual break-outs of which states reported 25% or more "don't know" or missing for a particular question, see the National Report.

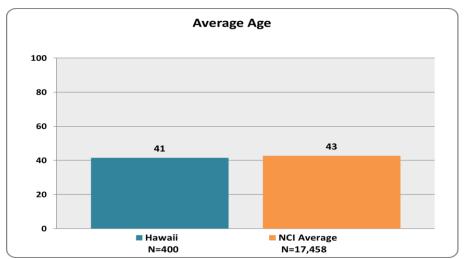

What is contained in this report?

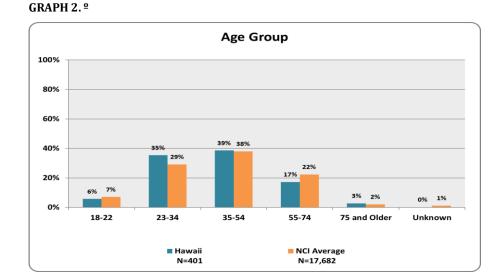

This report compares the 2015-16 NCI Adult Consumer Survey demographic and individual outcome results from Hawaii to the NCI Average (the average of all state percentages). A total of 17,682 valid surveys were completed across thirty-six (36) states (including the District of Columbia). All results are shown in chart form along with descriptive text to the right of each outcome chart. **Please note,** if a state had fewer than 20 respondents to a certain question, the state is excluded from the analysis for that particular question.

The data shown in this report are unweighted and unadjusted. To see comparable data for all states, refer to Appendix D of the Adult Consumer Survey National Report. The national and state data results for the NCI Adult Consumer Survey can be found online at http://www.nationalcoreindicators.org/resources/reports/.

Choice and Decision-Making

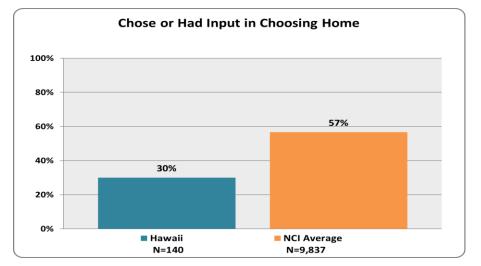

PEOPLE MAKE CHOICES ABOUT THEIR LIVES AND ARE ACTIVELY ENGAGED IN PLANNING THEIR SERVICES AND SUPPORTS.

Note on Analysis:

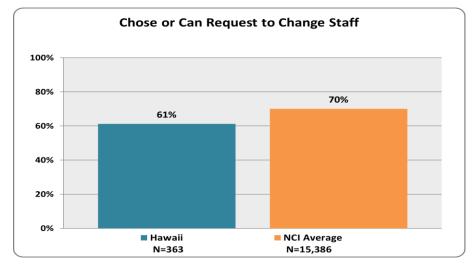

Unlike in the body of the Nation Adult Consumer Survey report, the data shown below are unweighted and unadjusted. To see comparable data for all states, refer to Appendix D of the Adult Consumer Survey National Report, accessible at

http://www.nationalcoreindicators.org/resources/reports/.

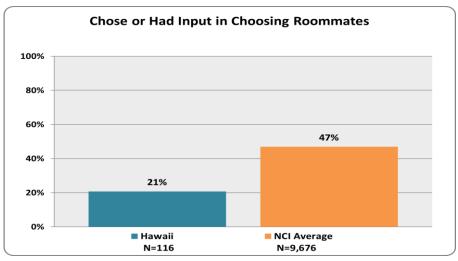

GRAPH 27.

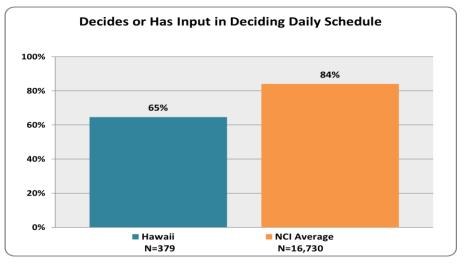

GRAPH 29.

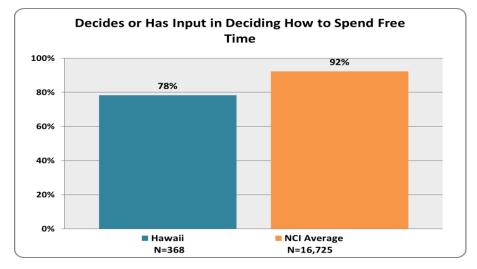

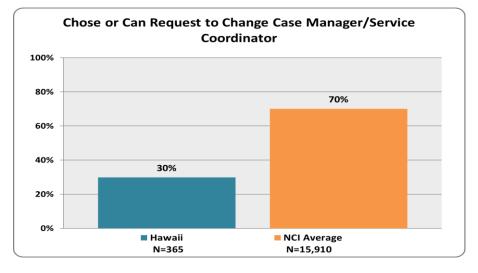

GRAPH 30.

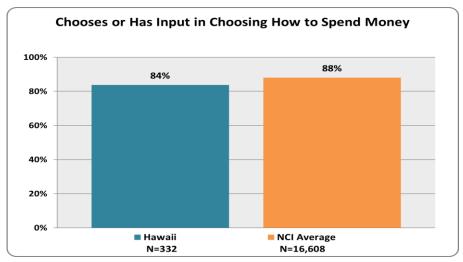

GRAPH 31.

GRAPH 33.

GRAPH 32.

Work

People have support to find and maintain community integrated employment.

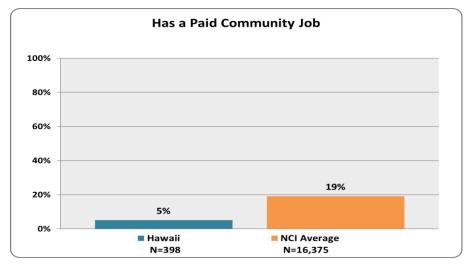

Important notes on employment questions:

A paid individual job takes place in a local business alongside peers who do not have disabilities—that is, the job is part of the typical labor market (e.g., competitive employment). A paid group job in a Community-based Group Residential Settings is done in an integrated setting, as part of a group of not more than eight people with disabilities (e.g., enclave, work crew).

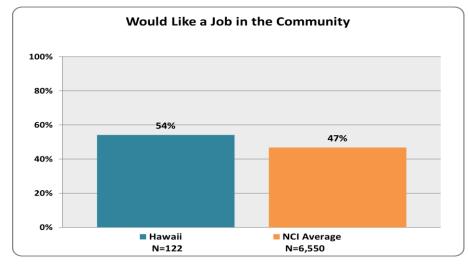

NCI reports on three types of community jobs. The description for these categories were changed for 2015-16:

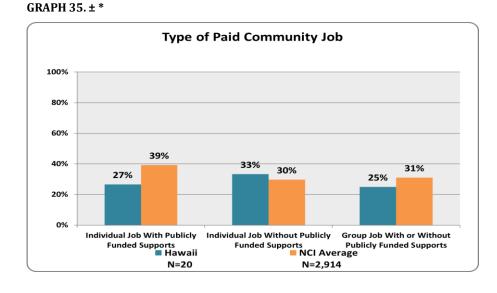

- 1. Individual job without publicly funded supports—an individual job in which the person *does not receive* state or other funded supports;
- 2. Individual job with publicly funded supports—an individual job in which the person *receives* state or other funded supports; and
- 3. Group-supported—a job that takes part in an integrated setting but is done with a group of individuals with disabilities (e.g., work crew). Groupsupported jobs may or may not receive publicly funded supports.

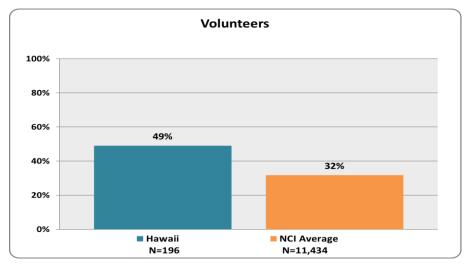

GRAPH 39.±

GRAPH 40.

^oNew variable to reporting

± Item changed from previous years – community employment categories were described differently for 2015-16 (see chapter introduction for more detail)

Self-Determination

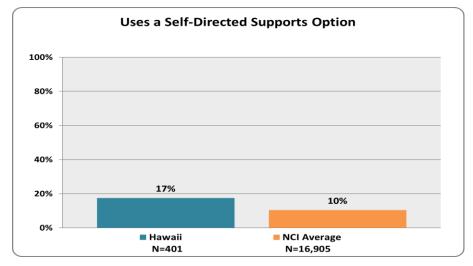

People have authority and are supported to direct and manage their own services.

IMPORTANT NOTE ON CHANGES TO THE SURVEY TOOL AND ANALYSIS. NCI broadened the description of self-directed supports from only including those participating in specific self-direction programs or waivers to include those who are using self-direction or participant direction for any part of their services. It is phrased as:

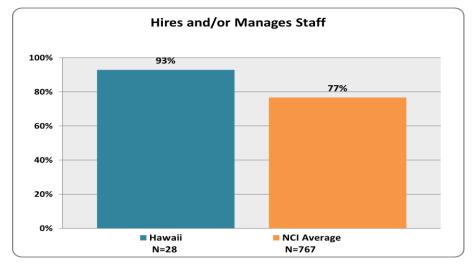

"Self-directed" or "participant-directed" supports options offer individuals (and their representatives, including family members) the opportunity to manage some or all of their services. They may hire and fire their own support workers and/or control how their budget is spent.

Additionally, questions on self-direction were moved from Section I (where only the person receiving services may respond) to Section II to allow for proxy responses when applicable.

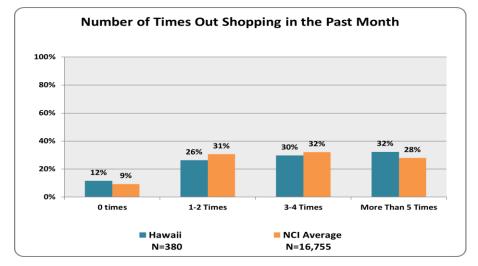

GRAPH 46. [~]

Community Inclusion

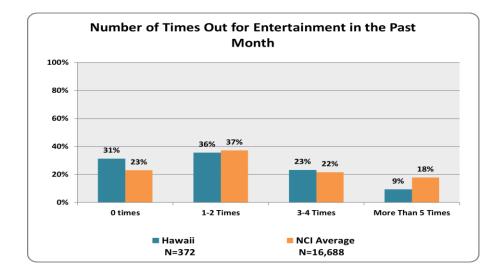

People have support to participate in everyday community activities.

IMPORTANT NOTE ON CHANGES TO THE SURVEY TOOL AND ANALYSIS. Response options to questions around the frequency of participation in community activities changed from being continuous (number of times person did a certain activity) to being categorical (person did a particular activity 0 times, 1-2 times, etc). Consequently, the way that the individual community inclusion items are being reported in the tables has changed from the average number of times people performed the activity to the proportion of people who performed the activity at least once (the charts demonstrate the NCI Average for all response options). The calculation of the Community Inclusion scale also changed—from a simple sum of the number of times the activities were performed to an average of the proportions who performed the activities at least once. The calculation of the Community Inclusion scale is now similar to the calculation of choice and decision-making scales.
